

1912 DASH

Speedometer hole pattern is typical for Stewart Model 26 and others.
 The Speedometer is mounted 3/16" to the left of the floor board notch for the speedometer cable.
 The speedometer cable thus slants to the right side as it passes through the floorboard and
 on through the hole in the splash apron on the outside of the frame rail.
 Speedometer is mounted with #9 x 5/8" Slotted Round Head Brass Wood Screws
